EXPERIENCE

ArvatAI

Remote, Bangalore | March 2025 - Current

Founding SWE Intern

- Orchestrated **Churn Prediction Agent** and **Upsell Opportunity Finder Agent** from scratch, enabling data driven decision for B2B SaaS increasing user engagement by 25%.
- Engineered TimeZone-aware scheduling system for Playbooks and Agent runs using **Gin** and **FastAPI**, reducing scheduling drift issues by 90%.
- Optimized **ReactJS** dashboard rendering and data display, cutting average load times by **50%** and improving frontend reliability across views.

Dressify

Remote | July 2023 - May 2024

Software Engineer Intern

- Built scalable backend APIs with **NestJS** in CQRS, handling user styling history, wardrobe management, and recommendation feedback loops.
- Developed and optimized frontend components using **Next.js**, Ant Design, and styled-components, ensuring responsive UI for browsing and interacting with AI-curated fashion feeds.
- Integrated background jobs and event-driven architecture with **BullMQ** and **Redis**, automating tasks like image preprocessing, recommendation queueing, and notification delivery.

SKILLS

Programming Languages: C/C++, Python, Java, Golang, JavaScript, TypeScript, HTML, CSS
Libraries/Frameworks: ReactJS, NextJS, NodeJS, ExpressJS, NestJS, Gin (gonic), FastAPI
Tools / Platforms: Git, Github, Docker, Figma, Photoshop, AWS, Firebase
Database: MySQL, SQLite, MongoDB, Redis, PostgreSQL

PROJECTS

Papers | Github

Java

- Lead the development of ScreenGallery, an intuitive mobile application geared towards enriching user experience through a vast array of captivating wallpapers.
- Pioneered the implementation of user-centric features including streamlined navigation, robust search functionality, dynamic filters, and extensive customization options.
- Improved the curation of a diverse collection of top-tier wallpapers, meticulously categorized to cater to individual preferences spanning nature, abstract, technology, and seasonal motifs.

Nerd Trader | Github

NextJS, NodeJS, PrismaDB

- Implemented customizable tools to streamline stock analysis and decision-making processes.
- Developed and maintained seamless accessibility across various devices for user convenience.
- Spearheaded user experience improvements, resulting in higher customer satisfaction and fostered a collaborative environment.

Reading Between the Lines | Github

Python, Flask, Matplotlib

- Engineered an online web platform utilizing Python to conduct sentiment analysis on headlines sourced from the Reddit API, encompassing any subreddit.
- Team led the development of a foundational AI model for sentiment analysis, leveraging transformer-based techniques to refine analysis accuracy and efficiency.
- Employed Matplotlib to visualize sentiment analysis results through graph representation, enhancing data comprehension and interpretation.

EDUCATION

Jaypee University of Engineering and Technology

Guna, India

Bachelor of Technology in Computer Science and Engineering

2021 - 2025

CGPA: 9.5

ACADEMIC ACHIEVEMENTS & EXTRA-CURRICULAR

- Ranked 2nd in a local Hackathon among 30+ teams in 2021.
- Facilitated workshops and seminars to enhance technical skills and foster a culture of innovation among members in Technical Club.
